INDEX
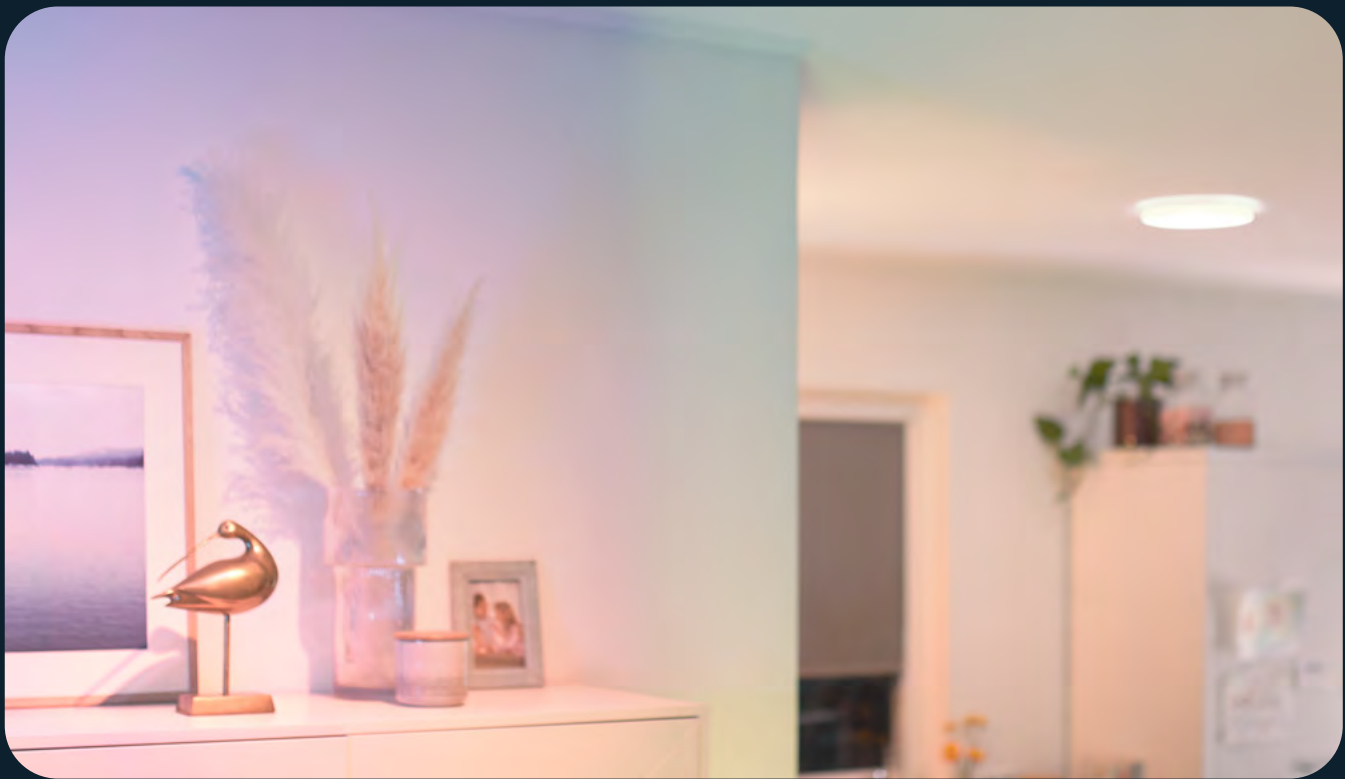

WiZ Connected Lighting

WiZ Connected is an Internet of Things software solution provider focused on delivering easy-to-use, Wi-Fi-based smart lighting. Owned by Signify, the world leader in lighting, WiZ serves both consumer and professional markets in more than 60 countries.

We create a connected ecosystem with user friendly and feature rich app, combined with plug & play devices that work on users existing Wi-Fi network. Whether you are looking to create a welcoming environment or have your lights adapt to your lifestyle, WiZ helps you to do so simply and effortlessly.

FAQ

PAIRING

1. Can I pair lights if my phone is on 3G/4G network?
No, you need to be on the Wi-Fi network you want to use to pair the lights.

2. Can I use WiZ lamps without a router? (Wi-Fi direct)
No, WiZ lamp will need to connect to your router so that they can connect to the cloud.

3. My light isn't pulsing.
Make sure that you have the right tempo or sequence. Power off 10s, then do ON – OFF – ON – OFF – ON.

4. How can I be sure I'm on 2.4GHz?
Enter your password in the app. Put the light in pairing mode, then walk away from the router and pay attention to the Wi-Fi signal "bars" on your phone. They will go down gradually, then back up suddenly. This signals you have switched to 2.4GHz because 5GHz was too weak. Now tap on "Start" in the app to start the pairing.

5. I have a Mesh router, what do I do?
If you want to use Modes 1-3, you may need to unplug one or two units, to make sure you can switch to 2.4GHz while walking away from the remaining units. Otherwise just use Mode 4.

6. The automatic firmware does not complete. What do I do?
Wait 10min, then power off the light and back on. If no change, please re-do pairing.

7. Can I connect my lights to my university Wi-Fi / office network?
Likely not. Most companies use WPA-enterprise security, which is not supported by WiZ. Please use a WPA2-Personal network.

WORKING WITH 3RD PARTY SYSTEMS

8. My new light / scene does not show up in Google / Alexa.
Check that the integration is properly enabled and linked. If so, just try "Hey Google, sync my devices" / "Alexa, discover devices" and your new lights or scenes will get picked up.

9. How can I find the code to integrate with Google / Alexa?
Check the integrations menu in the WiZ App and select the integration you want to enable.l

10. How can I use WiZ with Apple HomeKit?
WiZ lights are not compatible with HomeKit, but you can use Siri shortcuts to call out Scenes or turn on / off all WiZ lights in the 'home'. HomeKit is a system allowing users control smart-home appliances using Apple devices. Siri Shortcuts provides a simple way to trigger 'actions' (turn on a Scene in the case of WiZ) with a tap on your iPhone or by asking Siri.

11. Can we connect WiZ devices to Tyua app now or in the future?
No, they can work together in 3rd party apps like Google Home or Alexa.

12. Bluetooth in WiZ vs. Bluetooth in HUE – what are the differences?
As of today, WiZ only uses Bluetooth to make pairing smoother, but not as core system layer. We plan to use Bluetooth to enable local control in 2021.
Hue uses Bluetooth for getting started with local control of up to 10 lights in one room. You will need to add a Bridge to upgrade to full access of all the features of the Hue system.

13. Are you able to use voice assistants if you had logged in to WiZ app via Facebook?
Sign in and integrations have 0% correlation. You can use any integration without even linking your WiZ account with any 3rd party identity provider.

14. Can you share the library of commands of voice assistants?
No. this depends on their systems.

OTHER TOPICS

15. Do WiZ lights support Zigbee / Bluetooth Mesh...?
No, only 2.4GHz Wi-Fi as of today.

16. How does out of home control work?
As long as the lights are connected to the Cloud (via a Wi-Fi router) any user with "owner" role can control them from anywhere (provided that his phone has internet access), through the Cloud.

17. I cannot control the light when I am away from home.
Check whether you have Owner or Guest access rights. If owner, make sure the light is powered on and Internet is working well.

18. My family wants to control the lights too. Does he/she need to connect them to his/her phone as well?
No, there is no need to redo pairing. Just invite him/her in the system.

19. Why can't I change the settings of my lights? / I do not see all the settings.
Please check whether you are Guest or Owner.

20. My Rhythm does not turn on my lights.
Rhythms never actively turn lights on. They only define the behavior when "ON" is received. Try Scheduled Events.

21. I want to replace my phone. Do I need to reset everything?
No. On your current phone, go to the settings of the WiZ app and sign in with one of the options. When launching WiZ on your new phone, just sign in with the same option. Note: Signing-in helps you prevent your WiZ Home settings from being lost if you lose your phone.

2. Can I be signed in with more than one option?
Yes, absolutely. No problem with that.

23. Some of my lights do not have all the light modes available. Do not respond to certain modes.
Please check whether your lights are Color lights or Tunable white lights (warm to cool white only). Tunable white lights have limited options for light modes.

24. Do I need to reset my light to put it in another room?
No. Just open the settings of the light and change its location. It's that simple.

25. My lights take a long time to turn off. Is it normal?
Check the fade-in / fade-out settings in the settings of the room. You can adjust this.

26. Can I use my WiZ lights on a dimmer switch?
Dimmer switches are not supported for all smart lighting products because they may not provide stable power to the chip. If you need to connect your WiZ lights on a dimmer switch, please always keep it at the maximum dimming level to ensure a stable power supply.

27. I cannot control my lights when I power them off (via a wall switch or via the table lamp switch). Scheduled events do not turn them on.
Lights need to remain powered on to be available in the app and for schedules to work. The app turns your lights on and off. The wall switch always remains 'on'.

28. Can WiZ products be used outdoor?
Depends on the product hardware specifications. Depends on your router and where it is placed. There is no standard answer to this.

29. What is the max distance WiZ lamps will receive the signal and can operate on? Can they operate through walls / metal etc.?
Same as above. A few walls are not a problem. Tight-fit metallic enclosures can interrupt the connection to the device.
